

Top-of-the-Rack Installs Made Easy

The ServerLIFT RL-500 Platform Riser provides safe and convenient server support for top-of-the-rack installs in height-restricted areas by positioning the IT equipment higher than the ServerLIFT unit itself. This ensures that low ceilings, containment structures, overhead cable trays and other obstructions won't interfere with the ServerLIFT mast before the server reaches its install point - even with the ServerLIFT mast extended fully upward.

- ✓ Eliminates clearance issues inside containment structures and under overhead obstructions
- ✓ Perfect for any data center environment
- ✓ Compatible with all ServerLIFT models
- ✓ One tech per install, every time
- ✓ Easy four-point attachment

Expanded Functionality

The RL-500 Platform Riser also raises the working height of the platform, expanding the capability of any ServerLIFT machine to over 58U high!

- ✓ Supports up to 500 lbs (226 kg)
- ✓ Fits into standard 19" racks
- ✓ Raises platform height by 9U (15.75" or 40cm)
- ✓ Includes four attachment thumb screws
